Web Development Immersive Student | General Assembly | Atlanta, GA
Feb 2017 – May 2017

Built fluency in front-end and back-end web development technologies in a rigorous three-month, 500-hour full-stack web development program. The program focused on Common best practices in object-oriented programming(OOP), MVC frameworks, data modeling.

Simon Game
Created SIMON SAYS game during the second week of class utilizing HTML5, CSS3, Git/Github JavaScript and DOM manipulations

Hiking Trails App
Created a MEN Stack application, which promotes the user to create, customize and share their outdoor activities with others. Built using: MEN (MongoDB, Express.js, Node.js), HTML5, CSS3, Bootstrap, Materialize, Git/Github and Google Maps API. Deployed on Heroku.

Goldfish App
It is a MEAN stack app store just for web developers, which allows the user to save their favorite applications and readily available for reference or download. Built using: MEAN (MongoDB, Express, Angularjs, Node.js), HTML5, CSS3, Bootstrap, Materialize, Git/Github and Google analytics API. Deployed on Heroku.

GiiG App
GiiG is a modern staffing aid for restaurants in the style of Uber. Job Maker posts the jobs and notice is emailed out to all qualified Jobseekers. The first Jobseeker who responds gets the job and both parties are notified.
Built using: AngularJs, Ruby on Rails, Html5, CSS3, Devise authentication, Paperclip, Amazon S3, Facebook omniauth, Google places and reverse geolocation, Stripe, Google analytics, Git/GitHub, Materialize, and Bootstrap. Deployed on Heroku.
